VIRGINIA:

SPECIAL EDUCATION DUE PROCESS HEARING

RECEIVED Complaints & Dua Process

by Petitioner

PUBLIC SCHOOLS

DECISION OF HEARING OFFICER

This matter came to be heard on upon the written request of (hereinafter referred to as "), pro se, of (hereinafter referred to as a minor, to terminate special education services for and return to a regular classroom setting. is a rising grade student attending the School at Virginia. was initially determined eligible for special education services in At that time was determined eligible for services in the area of and _____e Services, pursuant to the guidelines set forth in the Individuals with Disabilities Education Act (IDEA), 20 U.S.C. Section 1400, et. seq. With the written consent, has received such services since placement in special education in In of was admitted to aprivate day school for students with serious behavior problems and emotional disturbances, after displaying defiant, disrespectful and School. While a aggressive behavior towards students and staff at student at showed little or no respect for authority, engaged in fights, refused directions and became verbally abusive. In , we evaluation indicated anxious behaviors and a violent orientation.

At the beginning of the hearing, it was the position of the solution of the solution of the solution pursuant to the IDEA guidelines, but the solution had previously refused to give permission for testing. During the course of the hearing, the solution provided written permission and consented to reevaluation. Therefore, the issue is most as to whether should be reevaluated without the consent. All parties agreed that it would be in solvest interest for the Hearing Officer's decision to be delayed until such time as the results of reevaluation could be considered and briefs could be submitted. The Hearing Officer granted the request for delay. A request for delay was also granted so that serious incident reports" (CIRs) for school year solution could also be gathered and considered.

Based on the results of the reevaluation and other evidence admitted during the hearing, it is the position of the Public Schools that I should not be removed from the special education program but should continue to receive special education services and remain a student at The Public Schools contend that both academic and behavioral performance, as well as the results of reevaluation, clearly dictate ineed for continued special education services, and, that to remove from the special education program at would result in a denial of right, as a disabled child, to receive a "free appropriate public education" (FAPE), as required by Section 1412 of the IDEA (20 U.S.C. Section 1412 et. seq.)

It is the position of the that in when initially agreed for to be placed in the special education program, that agreed for the limited time of three years. The contends that, as it is right to remove from the special education program as well as the School, and have placed in a regular classroom setting at a regular school. The contends that has been receiving good grades and is therefore no longer in need of special education services or the unique services rendered at

Based upon most recent reevaluation, the Eligibility Committee on . again determined that was eligible for special education services in the areas of . The issues in this case are three-fold: (1) Whether the provided "informed consent" as required by the IDEA when initially agreed for to be placed in special education classes. (2) Whether having been evaluated as a handicapped child pursuant to the IDEA guidelines, could receive a "free appropriate public education" if completely removed from special education classes and placed in a regular classroom environment. (3) Whether has been mainstreamed to the maximum extent possible.

Whether the provided "informed consent" as required by the IDEA when initially agreed for to be placed in special education classes.

The IDEA requires parental consent before conducting an initial evaluation or reevaluation. Parental consent is not required before (1) Reviewing existing data as part of an evaluation or a reevaluation; or (2) Administering a test or other evaluation that is administered to all children unless, before administration of that test or evaluation, consent is required of the parents of all children. 20 U.S.C. 1415(b)(3); 1414(a)(1)(C) and (c)(3). If the parent of a child with a disability refuses consent for initial evaluation or a reevaluation, the agency may continue to pursue those evaluations by using the due process procedures outlined in 34 CFR §§300.507-300.509, or mediation procedures as set forth in 34 CFR §300.506, if appropriate. Such is this case.

The evidence indicates that in provided written consent for to be evaluated for, and to receive, special education services. was initially determined eligible for special education services and placed in a special education classroom, and later Since initial placement, as remained in special education. In the requested that be removed from the special education program, as well as and placed in a regular

classroom environment. The contends that when initially agreed for to be placed in the special education program, thought the program would be for only three years.

Pursuant to 34 CFR §§300.500-300.529, consent means that: (i) The parent has been fully informed of all information relevant to the activity for which consent is sought, in his or him native language, or other mode of communication; (ii) The parent understands and agrees in writing to the carrying out of the activity for which his or her consent is sought, and the consent describes that activity and lists the records (if any) that will be released and to whom; and (iii) (A) The parent understands that the granting of consent is voluntary on the part of the parent and may be revoked at anytime. (B) If a parent revokes consent, that revocation is not retroactive (i.e., it does not negate an action that has occurred after the consent was given and before the consent was revoked).

The evidence suggests that in was experiencing severe academic problems. It was reported that would not read and was functioning academically well below agrade level. The evidence also suggests that became a school disciplinary problem, unable to get along with other students or adults.

saw enrollment in the special education program as a means to prevent child from continued academic failures as well as further and more severe disciplinary actions by the school. was fully informed about the evaluation and planned placement in a special education classroom. The gave written permission to have placed in the special education program and was provided with a copy of all documentation held by the garding placement. The consent was voluntary. was in no way coerced or forced to sign the consent document. I therefore find that the knew, or should have known, that was giving permission for to be placed in the special education program and purpose of the

program when gave written consent. I further find that the believed that enrollment in special education would provide child with protection from further or more severe disciplinary consequences and would also provide with the best and most reasonable FAPE at that time and that gave "informed consent."

I am, however, concerned about the seeming inability to understand that academic achievements while in special education, and specifically at were a direct result of being taught on a grade level commensurate with bility to learn, the individual instruction received, and Individual Education Program (IEP). The presented clear and convincing evidence, through both oral testimony and written documentation, of present level of learning, same being at least two levels below the performance of a non-disabled child of age and grade. Nonetheless, the seems to honestly believe, without any substantiating evidence, that could function and learn in a regular classroom setting, commensurate with age and grade level, without benefit of any special education services. Given the seeming inability to understand these fundamental principles, it is recommended that the and child be provided counsel, or at minimum, a representative, in any future proceedings to insure that the child's best interests are protected.

Whether having been evaluated as a handicapped child pursuant to the IDEA guidelines, could receive a "free appropriate public education" if completely removed from special education classes and placed in a regular classroom environment.

Every school district is legally required to identify, locate and evaluate children with disabilities (20 U.S.C. §1412(a)(3)). After the evaluation, a disabled child may be provided with specific programs and services to address his or him special needs. IDEA defines "children with disabilities" as individuals between the ages of three and 22 with one or more of the following

conditions (20 U.S.C. §1401(3)(26); 34 C.F.R. §300.7): mental retardation, hearing impairment (including deafness), speech or language impairment, visual impairment (including blindness), serious emotional disturbance (emphasis added), orthopedic impairment, autism, traumatic brain injury, specific learning disability (emphasis added), or other health impairment. That been evaluated and identified as in need of special education in the area of the special with an additional services. It is also clear from documented behavior that is in need of assistance with anger management and is emotionally disturbed. For to have qualified for special education under IDEA, it was simply not enough that have one of these disabilities. There must also have been evidence that disability adversely affected educational performance.

The findings of the Eligibility Committee clearly suggest that is academically performing well below average in the areas of reading, reading comprehension and verbal comprehension. (See Summary of Eligibility Committee dated violent and aggressive behavior during school year should also be considered and noted. During the last school year at was issued over SIRs. This is significant. During the school year, behavior was also labeled both disruptive and defiant. was cited on numerous occasions for extremely serious infractions: fighting, insighting fights, destroying property, throwing chairs and desks, refusing to participate in classroom activities, cursing, and overall negative aggressive behavior. This is been characterized as I find extreme negative behavior to be alarming.

Given disruptive and violent behavior, coupled with low academic abilities, I find that to now remove from the special education program or would deny a FAPE.

most recent evaluation by the Eligibility Committee as and obvious condition of being emotionally disturbed clearly identifies continued need and requirement for self-contained, center-

based instruction by means of special education services. I find that should continue enrollment in the special education program pursuant to the IDEA, and should continue to receive special education services. I further find that the efforts to terminate special education services for the not in best interest and would result in the denial of a FAPE for 8 VAC 20-80-58(B)(3).

Whether was been mainstreamed to the maximum extent possible.

In the case of Sacramento City Unified School District vs. Holland, No. 92-15608, U.S. Court of Appeals, Ninth Circuit (1994), the Court upheld a lower court's decision in which the lower court found that when school districts place students with disabilities, the presumption and starting point is to mainstream (emphasis added). In this case, the parents challenged the School District's decision to place their daughter half time in a special education classroom and half-time in a regular education classroom. The parents wanted their daughter placed in a regular classroom on a full-time basis. The child in this case was an 11-year-old with mental retardation, and was tested with an I.Q. of 44. The School District contended the child was too "severely disabled" to benefit from full-time placement in a regular class. The court found in favor of including the child in a regular classroom. This case established the following four-part balancing test to determine whether a School District is complying with IDEA by placing the child in the "least restrictive environment" (LRE): (1) The educational benefits of the child's placement in a regular class with appropriate aids and services; (2) the non-academic benefits of interaction with non-disabled children; (3) the effect of the disabled child on the teacher and other students in the classroom; (4) the cost of supplementary aids and services associated with mainstreaming the child with a disability.

Upon application of this four-part balancing test when determining whether should not be placed in the LRE given disabilities, unlike in the above case, I find that should not be

mainstreamed given misrespect for authority, defiant, disruptive, and often violent behavior. I also find that behavior would most likely impede normal classroom progress. Further, I find that level of learning could frustrate if mainstreamed with non-disabled children who are learning on appropriate grade level.

Goals and objectives should be of primary concern when addressing the needs and daily program of set a detailed in IEP. As a general rule, the goals and objectives refer to academic, linguistic and other cognitive activities, such as reading or math. IDEA specifically calls these "measurable annual goals, including benchmarks or short-term objectives" related to a child's specific educational needs and involvement in, if appropriate, the general curriculum (20 U.S.C. §1414(d)(1)(A)(ii)). While the goals and objectives are usually academic and cognitive in nature, there is no restriction on what they may cover. They should reflect whatever the IEP team determines is important to a child's education. Goals and objectives can relate to physical education and how a child socializes or interacts with peers and staff. Whether a child is receiving a "free appropriate public education," as required by the IDEA, may depend on whether the program offered by the school district can help that child to achieve individually set goals and objectives. The IEP must include information about the instructional setting or placement for a child.

At the root of IDEA is the requirement that children with disabilities be placed in the "least restrictive environment" (LRE). This requirement is often referred to as mainstreaming. While IDEA expresses a preference for regular education, it recognizes that some children with disabilities should not be placed in a regular classroom setting. I find this to be the case with

Individual need determines the appropriateness of a placement. If regular classroom placement is not appropriate, as is the case with the IDEA requires that the school district provide a range

of alternative placements, including the following: regular classes for part of the school day; special classes in regular schools-for example, a special class for children with learning disabilities; special public or private schools for children with significant difficulties, such as a school for emotionally troubled students; residential programs; home instruction; and hospital and institutional placement.

The IEP must specifically include related services -- developmental, corrective and other supportive services, such as speech therapy, transportation or counseling services -- necessary to facilitate a child's placement in a regular classroom or to allow the child to benefit from special education services. The IEP may also include other components, such as specific teaching methods or class subjects, or anything else the IEP team agrees should be included (20 U.S.C. §1414(d)(1)(A)).

apparent disrespect for authority. Plevel of learning and disruptive behavior dictate that Premain in a self-contained special education classroom setting. Daniel R.R. v. State Board of Education, No. 88-1279, U.S. Court of Appeals, Fifth Circuit (1989), held that although IDEA requires children with disabilities to be educated with children who are non-disabled to the maximum extent appropriate, the school is not required to mainstream a child with a disability if the regular education classroom setting is unable to meet the educational needs of the child and provide FAPE. This case created a two part test of the appropriateness of the placement - (1) may the child be educated satisfactorily in a regular classroom with supplementary aids and services, including a comparison of the benefits a child will receive from the regular classroom as opposed to the segregated, special education classroom and the possible negative effects on inclusion on the other students in the classroom, and (2) has the school mainstreamed the child to the maximum extent possible.

When applying this test, I find that would benefit more from enrollment in a segregated special education environment, and that special education environment, and that

impact students in a regular classroom setting. I do not believe that deducational experience would benefit from integration into a regular classroom setting. I therefore find that the school has mainstreamed to the maximum extent possible. To remove from the special education program or from this time would deny frame. FAPE. Given the mission of from the students with serious emotional and behavior problems, and to provide them with individualized attention, coupled with low academic skills and behavioral problems, I find the environment at to be the most conducive for frequency deducational needs.

It is therefore ORDERED that remain a student at The School and continue to receive special education services; that an IEP team be convened to draft an IEP consistent with the recommendations of the Eligibility Committee and with measurable annual goals, including benchmarks or short-term objectives; that the IEP be implemented absent the second second with an aim towards behavior modification and academic improvement that could provide for return to a regular school and regular classroom setting.
